

**PEAK LIST
HUNDRED PEAKS SECTION
ANGELES CHAPTER, SIERRA CLUB**

Approved by Central Committee 10 November 1983. There are 268 peaks on this list.

Changes from the Peak List dated January 1981:

1. Summit of Castle Rocks (27D) moved to position shown on new 7 ½ min map.
2. New maps in Mt. San Jacinto area have minor elevation changes.
3. Errors have been corrected.
4. Summit of Three Sisters (23H) moved to the highest sister.

Membership

Any member of the Sierra Club may become a member of the Hundred Peaks Section by (1) ascending at least 25 of the peaks listed on the Peak List, (2) applying to the Membership Chair listing peaks and dates of ascent and giving Sierra Club membership number, and (3) subscribing to the Section Newsletter, the 100 Peaks LOOKOUT, for \$5.00 per year. Emblem status is attained by ascending 100 listed peaks. Recognition is also given for ascending 200 peaks and for ascending all of the peaks on the list. Lists of peaks climbed and dates for 100, 200 and list completion should be sent to the Treasurer together with money for pins or patches that are desired.

Climbing Guides

The Mountain Records Committee of the Section Publishes climbing guides for each peak which contain information on routes and on private property and fire closure restrictions. Members are urged to submit corrections or suggestions to the Mountain Records Committee. Instructions for obtaining the guides and the Peak List are given in the LOOKOUT.

Maps

Quadrangle maps marked "*" are of the USGS 15 min series; all others are of the 7 ½ min series. For some areas both series are available and may have identical names. Elevations shown with a "+" indicate the highest contour line on those peaks which do not have an explicit summit elevation given on the map. Some of the peaks are located near a map edge or corner and adjacent maps may be needed in order to plan the route and to do field navigation. For these cases the additional maps are named after the map which shows the peak itself.

Location

Some peaks are not named on the USGS quadrangle maps although most of these can be identified by the explicit summit altitude on the map. To aid in locating these peaks, the location is given on the Peak List by the standard six-digit convention using the UTM grid. The grid is defined by the numbered blue tick marks which are spaced one kilometer apart along the map edge. A location is designated by a six-digit number; the first three digits comprise the easterly coordinate and the second three digits comprise the northerly coordinate, each to the nearest 100 meters. The graphic scale on the map lower boundary can be used for the distances less than one kilometer. For example, Etiwanda Pk (17F) has the UTM location coordinates of 473874. This means Etiwanda is 300 meters east (third digit) of the north-south grid line marked by "47" on the blue tick marks at the top and bottom edge of the map. Etiwanda is 400 meters north (sixth digit) of the east-west grid line marked "87" on the left and right edges of the map.
